JMAC Intel · AI agents

A practice of JMAC Logistics LLC · Rocheport, Missouri

CAPABILITY STATEMENT
Service-Disabled Veteran-Owned Small Business

SBA VetCert SDVOSB · Founded by Marines · A person approves every agent action · Pilots sized for simplified acquisition

COMPANY OVERVIEW

JMAC Logistics LLC builds AI agents for logistics, procurement and back-office work through its JMAC Intel practice. We started on the warehouse floor in receiving, inventory control and returns, so we automate processes we have run ourselves. A person approves every outbound email, call or record change, and every agent action is logged.

CORE COMPETENCIES

- **AI phone voice agents:** receptionist, intake, order status, IVR and call-center deflection, with a logged summary of every call.
- **Document chat assistants (RAG):** answer staff questions from SOPs, policies and knowledge bases, citing the source document for every answer.
- **Workflow agents:** email classification and routing, purchase order and supplier follow-up, scheduling, data entry and triage.
- **Dashboards and data:** supply chain and warehouse KPI dashboards and alerts built on existing spreadsheets, WMS and ERP exports.
- **Logistics consulting:** warehouse and distribution process improvement, reverse logistics, inventory accuracy and forecasting.

DIFFERENTIATORS

- **Human in control.** Approval queues and audit logs on every agent. Nothing reaches a person or a record without staff approval.
- **Your data stays yours.** Deployed in your Azure or AWS tenant, or hosted for you. Never used to train public models.
- **Working builds, not slideware.** We adapt agents already running in production to your systems.

FOR PRIME CONTRACTORS

- **SDVOSB subcontracting credit** toward your small business plan goals.
- **A specialist AI sub** for voice, RAG and workflow scope on IT or logistics vehicles.
- **Teaming ready:** NDAs, teaming agreements and sources-sought responses.
- **Small, fast scope:** a pilot your customer can approve in weeks.

PAST PERFORMANCE

- LIVE **Purchase Order Management Agent:** drafts supplier follow-ups and PO updates from open orders; the buyer approves every outbound email or call.
- LIVE **Message Router Agent:** classifies incoming messages by intent and routes each to the right person or workflow, with an audit log.
- LIVE **SDVOSB Brain:** daily SAM.gov pipeline that scores set-aside and sole-source notices against a capability statement and extracts SOW text.
- CLIENT **Email intelligence platform, e-commerce reseller:** Microsoft 365 mailbox ingestion, intent classification and order/supplier search (Spring AI, Azure).
- CLIENT **Phone voice agent, small retail business:** answers calls, looks up orders and logs call summaries (Twilio).

Live = self-performed systems running in production today. Client = commercial engagements. No federal prime contracts to date.
